

European Space University for Earth and Humanity

UNIVERSEH is an alliance of five European universities established to develop a new way of collaboration in the field of Space, within the "European Universities" initiative.

The alliance aims to create new higher education interactive experiences for the university community, teachers and students, and for the benefit of society as a whole. Such initiatives will enable broadminded, informed and conscientious European citizens to capture and create new knowledge and become smart actors of European innovation, valorisation and societal dissemination within the Space sector, from science, engineering, liberal arts to culture.

Grant agreement number: 101004066

Funding Scheme: Erasmus+ / European Universities

UNIVERSEH – European Space University for Earth and Humanity is an alliance of

Introduction

The following report contains the results from the monitoring of most of the pre-defined indicators (01-07) and an update on the respective indicators. The report also contains a few recommendations with regards to future mobility reporting in the context of a European university alliance.

1. List of mobility indicators

The list of mobility indicators has been submitted in April 2022 as below:

Nr.	Indicator	Statistical data	Description
01	Collaborative Activities	Number, event/activity name, target group, cooperation with, organised by, date, university responsible, number of participants, contact details.	Statistical data regarding: 1. Activities developed in collaboration with ESN, 2. activities organised with the support of/in collaboration with local/regional stakeholders, 3. student-led activities/events at each university.
02	Staff mobility event	Number, event name, target group, date, university, number of participants, gender info (female/male/non-binary participants), contact, e-mail.	Data regarding events organised to promote staff mobility at each university.
03	Staff workshops	Number, seminar/workshop, target group, date, university, number of participants, language of seminar, contact, e-mail.	Data regarding joint staff seminars/workshops organised at each university.
04	Student mobility	Number, event name, target group, date, university, number of participants, contact, e-mail.	Data regarding student mobility events organised at each university.
05	Number of European Student Card users in UNIVERSEH	University, university term (autumn term 21/22, summer term 22 etc.), number of users.	Data regarding the use of the European student card at each university.
06	Erasmus mobility app	University, university term (autumn term 21/22, summer term 22 etc.), number of users.	Data regarding the use of the Erasmus mobility app at each university.

2. Recommendations

- Mobility reporting in a European university alliances faces multiple institutional, structural and statistical challenges that are manifold. In order to assure reliable data is collected across all European university alliances, the European Commission and relevant agencies should provide a detailed conceptual and statistical framework as a blueprint to ascertain solid data.
- Data collection at institutional level is a longlasting and continuous effort. In a digitalised work environment, making automated instruments available in order to facilitate not only a quicker but also more correct retrieval of data based on a clear, robust algorithmic data collection mechanism is crucial for the future monitoring of mobility.
- Statistical errors data considering student mobility reporting result often times from wrongful calculation of mobility datasets. Non-representative data can result from incorrect definition and in fact numerical calculation of the student population. In the context of UNIVERSEH, fundamental data on the actively involved students in the alliance is missing. Taking the simple student headcount as dataset however is incorrect as the mobility aspect is ignored.
- Mobility reporting in European university alliances has to take into account the factually involved individuals that are mobile. Defining mobility for all respective target groups thus has to be a primary step. Further, clear definitions (e.g. who can be counted for mobility and who is an alliance student?) given to the

4

UNIVERSEH – European Space University for Earth and Humanity is an alliance of

European university alliances by the European Commission would also make comparison between alliances more reliable and rise similarity of presented data.

- The new Erasmus+ programme clearly sets the framework for innovative forms of mobility increasing learners' flexibility whilst assuring to contribute to sustainable and lifelong growth of academics. Understanding mobility as core tool to strengthen a feeling of European belonging across the European university alliances thus should consequently result in collection and evaluation of quantitative data. Additionally, impact assessments should contribute to understanding whether such new, innovative mobility forms create the wished for changes from the learners' perspective.

UNIVERSEH – European Space University for Earth and Humanity is an alliance of
